

BRAKES

PERFORMANCE MACHINE FRONT VINTAGE 4-PISTON SINGLE CALIPER AND BRACKET

PM Brake Systems have set standards in the industry for braking. Style and function merge for an ultra-clean look with proven technology for optimal braking performance.

- Compatible with ABS
- Each caliper is machined from billet aluminum to eliminate flex
- Subjected to rigorous testing on the PM brake dyno to ensure performance
- Made in USA
- Except FX, XL with wire wheels and all Springers

Note: Note: 2006 and up Dyna uses 11.5" caliper and bracket on 11.8".

ROLAND SANDS DESIGN® CALIPERS

- Made in USA

Front

Front calipers feature differential bore pistons (1.125 in. and 1.375 in.) that apply a different force at both the leading edge and the trailing edge of the pads for superior braking. Includes DP brake pads, bleeder screw, 3/8 in. -24 banjo bolt, sealing washers and shim kit. Available for 00-up 11.5 in. disc applications.

Note: Dual-disc application require separate purchase of a left and right calipers.

BRAKES

JAYBRAKE

Biker's Choice® is proud to offer the JayBrake line of high-performance brake systems. Jay series 4- and 6-piston calipers make them the choice for the ultimate in style and stopping power. Kits include direct bolt on design for front wheel applications and with the appropriate brackets available for the rear wheel. Both the 4- and 6-piston calipers have progressive pistons and DP custom pads to allow the safest and smoothest stopping available. All calipers and brackets are based on 11.5 in. rotors and are available either polished or chrome-plated.

GALFER ROTORS FOR V-TWIN

Invented by Galfer in the early '90s, Galfer Wave® Rotors were designed to solve the problem of water and mud on brake rotor surfaces of trial competition motorcycles. As Galfer developed the design, they discovered an added benefit: the brake system was running cooler. When we combined our new design with the premium materials we had already developed for our round rotors, the resulting breakthrough began the new generation of brake rotor technology.

Made of Galfer's proprietary, non-recycled, high-carbon 420 stainless steel/8 composite. Laser cutting (not stamped like most others) leaves a precision cut while simultaneously heat-treating the rotor edge. Double disc-parallel grinding to assure perfect parallel flatness. Heat-treated to each specific application to prevent warping. Each of our designs are CAD-CAM and tested with a stress analysis program, as well as dyno/real life-tested prior to being offered on the market.

- KBA and TUV approved

BRAKES

EXCLUSIVE

TWIN POWER BRAKE PADS

ORGANIC BRAKE PADS

Organic Brake Pads from Twin Power™ is an exclusive product line consisting of a premium quality Aramid Fiber braking material. They are an economical yet practical product that meets or exceeds O.E.M. standards, providing you with the stopping power you need.

X-STOP SINTERED BRAKE PADS

Born from years of research and brake dyno testing, the Twin Power™ X-Stop Sintered Brake Pads benefit from the latest in design and manufacturing technologies. They have been crafted from a select blend of metallic and compound materials fused together resulting in greater heat resistance, longer pad life and increased performance over organic pads. Engineered for heavy-duty use, sintered pads are standard on most machines, giving you stopping power when you need it.

GALFER BRAKE PADS FOR V-TWIN

Galfer 1054 semi-metallic carbon compound:

Can be used for sport, touring and commuting applications. Works well in wet conditions as well as in cold brake conditions. Withstands abrupt temperature changes allowing for a quick feel return.

Galfer advance ceramic full metallic HH compound:

Will withstand friction ratings of 0.7u and does not require any heat to deliver friction. Advanced ceramic technology allows for pads to cool off as soon as pressure is released from the brake lever. Requires very little brake pressure effort under repeated braking. Recommended to those looking for the edge or ultimate stopping feel and control.

Note: All Galfer brake pads must be properly "Bedded-in" to achieve maximum output and reduce unnecessary rotor wear.

Galfer strongly recommends following these Bed-in directions:

1. Clean the brake rotor(s) with thin sand paper and water prior to new pad installation.
2. Towel dry the rotor surface after sanding.
3. Install the new pads and be easy with the brakes for the next 40-50 miles.

EBC® BRAKE PADS

Organic: pads for polished, chromed or standard rotors. Sintered (Double-H) Only: for standard (hardened and ground stainless steel) rotors. EBC Extreme Pro Race Pads: O.E.M. replacement to increase braking up to 18% longer life, minimal dust. Note: Some models may have a second rotor fitted as an optional extra. Please double check with your customer exactly which side the front rotor is fitted and if twin rotor or single.

EBC ORGANIC PADS

The EBC aramid fiber series has now been renamed NAO series or Non Asbestos Organic. Typical organic feel, which many riders prefer. Ideal for general use with low rotor damage characteristics.

- Environmentally friendly; free of asbestos, lead and other toxic materials

EBC SEMI-SINTERED V-PADS

Semi-sintered construction containing 30% copper by weight built within an organic matrix. Combines the long life of a sintered pad with the great feel of an organic pad. No rotor damage, normally only found using organic brake pads. Excellent for use in larger, heavier applications where long life may be an issue.

GOODRIDGE CLEAR COAT UNIVERSAL BRAKE HOSE WITH CHROME ENDS

PVC hose coating adds great looks, abrasion protection to expensive parts and resistance to damaging UV rays. PTFE liner is an inert material, compatible with all hydraulic and brake fluids, has a heat range of -158° to 500° and shields brake systems from moisture, unlike other materials like nylon. Stainless steel braid is superior in pressure rating, flame resistance and volumetric expansion to all other materials, including Kevlar®, resulting in unmatched stopping power. D.O.T. hoses feature Goodridge brand on hose. Coated and bare hose lines feature black or clear PVC coating, PTFE inner liner and beautifully chromed mild steel fittings with a 96 hour salt spray rating. Ebony series hoses feature black PVC coating, PTFE inner liner and premium stainless steel braided armor. Platinum lines feature a blingy, copper-woven coating, with a protective PTFE cover, PTFE inner liner and beautifully chromed mild steel fittings with a 96 hour salt spray rating.

- Choice of platinum, stainless or ebony series braided hoses
- All Goodridge brake hoses use the same premium stainless steel braided armor
- Length shown is from flare to flare, not end to end. Flare to flare measurement is determined by deducting 1.00 in. from overall length, so hoses will be 1.00 in. longer than length shown in chart.

BRAKES

GOODRIDGE EBONY 2 BRAKE LINE KITS

Contemporary black-on-black look offers the latest in cool and high performance. Available to fit all common non-ABS Harley-Davidson® models. Hose features black PVC coating, PTFE inner liner and premium stainless steel braided armor. PVC hose coating adds great looks, abrasion protection to expensive parts and resistance to damaging UV rays. PTFE liner is an inert material, compatible with all hydraulic and brake fluids, has a heat range of -158° to 500° and shields brake systems from moisture, unlike other materials like nylon. Stainless steel braid is superior in pressure rating, flame resistance and volumetric expansion to all other materials, including Kevlar®, resulting in unmatched stopping power. All hardware is zinc-plated mild steel with a 96-hour salt spray rating.

- Packaged in attractive eco-friendly boxes with bolts and washers

GOODRIDGE ECONOLINE BRAKE LINE KITS

A high-quality kit at an affordable price. Hose features clear PVC coating, PTFE inner liner and premium stainless steel braided armor. PVC hose coating adds great looks, abrasion protection to expensive parts and resistance to damaging UV rays. PTFE liner is an inert material, compatible with all hydraulic and brake fluids, has a heat range of -158° to 500° and shields brake systems from moisture, unlike other materials like nylon. Stainless steel braid is superior in pressure rating, flame resistance and volumetric expansion to all other materials, including Kevlar®, resulting in unmatched stopping power. All hardware is beautifully chromed mild steel with a 96-hour salt spray rating.

- Kits ship complete in clamshell packaging with bolts and washers

GOODRIDGE HIGH-END BAGGER BRAKE LINE KITS

The highest quality Harley-Davidson® brake line kits anywhere provide phenomenal performance and superior looks. Features stainless steel braided hose and beautifully finished hardware. Hose features include a PTFE inner liner, PVC hose coating and stainless steel armor braid. PTFE inner liner is an inert material that is compatible with all hydraulic and brake fluids, has a heat range of -158° to 500° and shields brake systems from moisture, unlike other materials like nylon. The PVC hose coating adds great looks, abrasion protection to expensive parts and resistance to damaging UV rays. The stainless steel braided armor is superior in pressure rating, flame resistance and volumetric expansion to all other materials, including other stainless braided hoses and Kevlar®, resulting in unmatched stopping power.

- Assembled in USA

GOODRIDGE BIG TWIN DELUXE PROFESSIONAL BUILDER BRAKE LINE KIT

This build-it-yourself-kit allows you the freedom of making brake lines for stock or custom Big Twins while your customer waits. The kit features high-quality, clear-coated, stainless braided hose and chromed banjos, bolts and fittings. Each kit contains over \$1,400 of product at retail value, which is enough to build several complete front and rear brake lines. It all comes in a convenient carrying case, which includes specialty tools to simplify assembly.

- Sold individually, unless noted otherwise

EXCLUSIVE

BIKEMASTER® CALIPER PISTON/BRAKE PAD SPREADER

Constructed from heavy-duty steel, this tool gives you the leverage needed when installing new brake pads or reinstalling a brake caliper by easily spreading brake pads and caliper pistons apart. The comfortable no-slip grips help you keep control while the corrosion-resistant coating extends the tool life.

JIMS® REVERSE BRAKE BLEEDING TOOL BY PHOENIX SYSTEMS

This patented brake bleeding technology makes servicing and bleeding the brake lines a snap. It's simple physics, air rises; this tool will push the fluid from the caliper to the master cylinder. There's no guess work, you can easily watch the master cylinder reservoir for all of the air bubbles to be removed from the brake system. Once there are no more air bubbles rising in the master cylinder-the brake lines are properly bled.

047731	148.95

JIMS® BRAKE CALIPER PISTON REMOVER

Supports the brake caliper pistons for removal by holding the pistons square to their bores. Prevents any damage to the pistons and the piston bores so seals and wipers can be replaced.

- Use on all 00-07 Harley-Davidson® four piston brake calipers

P/N	Retail
495074	76.50

EXCLUSIVE

BIKEMASTER® 1 LITER VACUUM BRAKE FLUID BLEEDER

Quick and easy way to bleed those stubborn brake lines. Takes less time to extract air bubbles from the brake system. Dual attachment allows you to bleed dual disc applications.

- Catch bottle has 1 liter capacity

P/N	Retail
152188	39.95

EXCLUSIVE

BIKEMASTER® BRAKE PISTON PULLER

Sometimes brake pistons can seize or stick in the calipers. You don't want to use vise grips, pliers or anything else that will ruin the surface to replace the pistons. The best way to remove brake pistons is by gripping the inside of the piston, since scratches in this area do no harm. The harder you grip, the harder the puller grips.
