REPLACEMENT GASKETS, SEALS AND O-RINGS FOR BIG TWIN

- Selection of high-quality Genuine James gaskets, seals and O-rings
- Our deep inventory, wide selection, fast shipping and friendly service makes stocking easy
- Made in the U.S.A.

RUBBER-COVERED METAL (RCM)

The James Gaskets Rubber-Covered Metal line of gaskets are made from a solid steel sheet coated on two sides with a high-temperature elastomer. Strategically placed elastomer beading helps insure a positive seal while our clear silicone conformal coating fills in minor imperfections in the flanges and provides for easy release upon removal. They have excellent torque retention properties and will not extrude under high torque load.

FOAMET® EXPANDED RUBBER GASKETS

Our Foamet® product line features an aluminum core coated on two sides with expanded nitrile rubber, then coated with a silicone release coating to insure a positive seal with excellent release characteristic upon disassembly. Available in beaded and non-beaded construction depending on the application.

MICROPOR® PAPER GASKETS

The James Gasket flexible paper gasket product line utilizes the latest in gasket paper technology called MicroPore®. These gaskets exhibit exceptional fluid resistance and sealability in a wide range of applications and flange conditions. With a reduced pore size, this material is very resistant to wicking or fluid migration through the material and capable of handling operating temperatures in excess of 500 degrees.

EXPANDED METAL CORE HEAD GASKETS

Our expanded metal core head gaskets are made from top-quality graphite-coated high-temperature fiber material chemically and mechanically fused to an expanded metal core. They provide excellent sealing performance, load retention, and structural strength and provide a clean release upon removal. The stainless steel armor protects the cylinder bore from the hot combustion gasses and provides a positive seal at the combustion chamber.

GENERAL**REPLACEMENT GASKETS, SEALS AND O-RINGS FOR XL/XR/BUELL MODELS**

- Drag Specialties has all your gasket needs covered
- All are top-quality Genuine James gaskets, seals and O-rings
- Made in the U.S.A.

**RUBBER-COVERED METAL (RCM)**

The James Gaskets Rubber-Covered Metal line of gaskets are made from a solid steel sheet coated on two sides with a high-temperature elastomer. Strategically placed elastomer beading helps insure a positive seal while our clear silicone conformal coating fills in minor imperfections in the flanges and provides for easy release upon removal. They have excellent torque retention properties and will not extrude under high torque load.

FOAMET® EXPANDED RUBBER GASKETS

Our Foamet® product line features an aluminum core coated on two sides with expanded nitrile rubber, then coated with a silicone release coating to insure a positive seal with excellent release characteristic upon disassembly. Available in beaded and non-beaded construction depending on the application.

MICROPOR® PAPER GASKETS

The James Gaskets flexible paper gasket product line utilizes the latest in gasket paper technology called MicroPore®. These gaskets exhibit exceptional fluid resistance and sealability in a wide range of applications and flange conditions. With a reduced pore size, this material is very resistant to wicking or fluid migration through the material and capable of handling operating temperatures in excess of 500 degrees.

EXPANDED METAL CORE HEAD GASKETS

Our expanded metal core head gaskets are made from top-quality graphite-coated high-temperature fiber material chemically and mechanically fused to an expanded metal core. They provide excellent sealing performance, load retention, and structural strength and provide a clean release upon removal. The stainless steel armor protects the cylinder bore from the hot combustion gasses and provides a positive seal at the combustion chamber.

REPLACEMENT GASKETS, SEALS AND O-RINGS FOR BIG TWIN TRANSMISSIONS

- Get the top quality of Genuine James, delivered with the great service of Drag Specialties
- Genuine James gaskets, seals and O-rings for Big Twin transmissions are made to last
- Made in the U.S.A.

RUBBER-COVERED METAL (RCM)

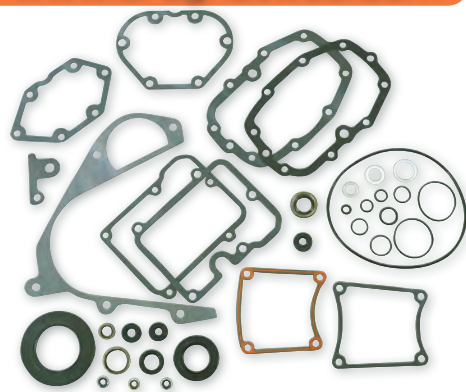

The James Gaskets Rubber-Covered Metal line of gaskets are made from a solid steel sheet coated on two sides with a high-temperature elastomer. Strategically placed elastomer beading helps insure a positive seal while our clear silicone conformal coating fills in minor imperfections in the flanges and provides for easy release upon removal. They have excellent torque retention properties and will not extrude under high torque load.

FOAMET® EXPANDED RUBBER GASKETS

Our Foamet® product line features an aluminum core coated on two sides with expanded nitrile rubber, then coated with a silicone release coating to ensure a positive seal with excellent release characteristic upon disassembly. Available in beaded and non-beaded construction depending on the application.

MICROPOR® PAPER GASKETS

The James Gaskets flexible paper gasket product line utilizes the latest in gasket paper technology called MicroPor®. These gaskets exhibit exceptional fluid resistance and sealability in a wide range of applications and flange conditions. With a reduced pore size, this material is very resistant to wicking or fluid migration through the material and capable of handling operating temperatures in excess of 500 degrees.

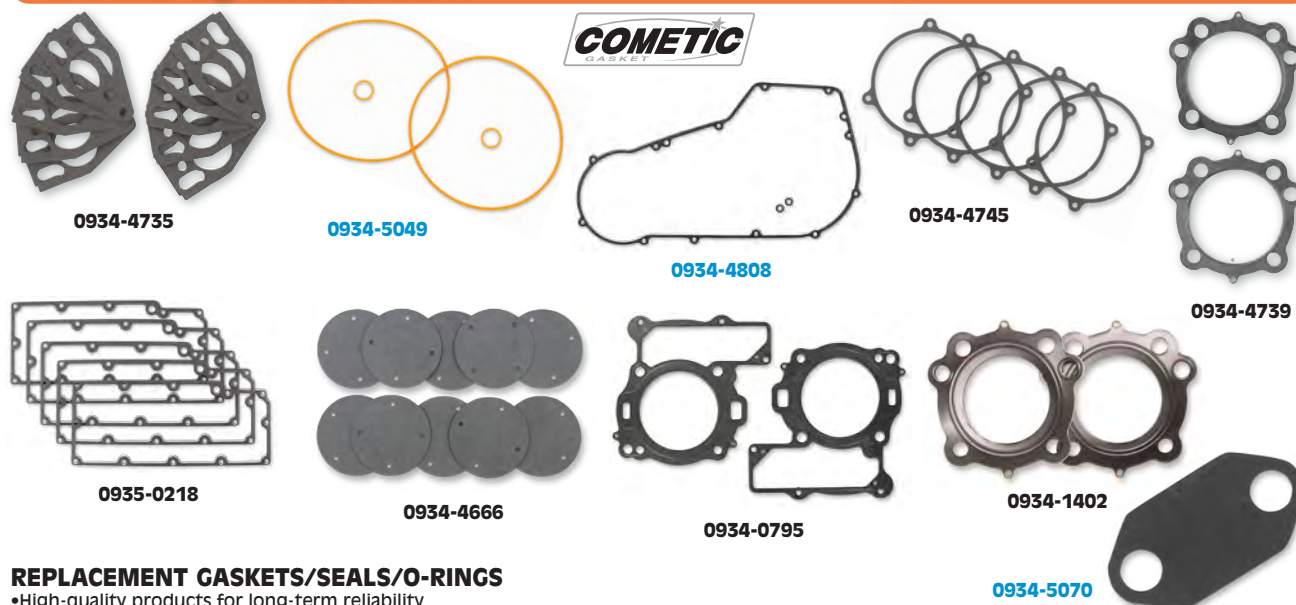

EXPANDED METAL CORE HEAD GASKETS

Our expanded metal core head gaskets are made from top-quality graphite-coated high-temperature fiber material chemically and mechanically fused to an expanded metal core. They provide excellent sealing performance, load retention, and structural strength and provide a clean release upon removal. The stainless steel armor protects the cylinder bore from the hot combustion gases and provides a positive seal at the combustion chamber.

REPLACEMENT GASKETS/SEALS/O-RINGS

- High-quality products for long-term reliability
- Manufactured from premium fuel-resistant materials that will not creep, crack or become brittle
- Gaskets available in multiple types to best suit the intended application
- Extreme Sealing Technology (EST) gaskets feature embossed steel gaskets covered with a proprietary rubber material or solid copper, depending on the application
- Multi-Layer Steel (MLS) gaskets feature two outer Viton®-coated embossed spring steel layers with an inner steel layer to provide additional support
- CFM is a composite material with a steel tang center laminated to provide excellent heat tolerance without delaminating while providing a long lasting seal
- Single-Layer Steel (SLS) gaskets feature a stainless steel core and embossed outer surfaces that create a heavy-duty seal between the center steel layer and the gasket mating surfaces
- Aluminum Foamette Material (AFM) gaskets feature an aluminum core and a chemically blown, compounded nitrile synthetic rubber coating that is bonded to the outside layer; do not require gasket sealer
- Viton® gaskets feature a stainless steel core with a .001" thick coating of Viton rubber on both sides
- Made in the U.S.A.

TOP END GASKET KITS

- EST (Extreme Sealing Technology) gasket kits include embossed stainless steel head, base and rocker gaskets covered with a proprietary rubber material
- Head gasket material allows heat to be drawn away from the combustion ring and dissipated evenly across the gasket surface to eliminate hot spots and gasket failure
- Sets contain all the necessary gaskets, seals and O-rings to rebuild the top end from the cylinder base upward
- Made in the U.S.A.

**PERFORMANCE
EXHAUST
PORT GASKETS**

- Copper gaskets increase flow between 7 to 10 cfm depending on the motor and head work
- Unlike mesh gaskets, which can restrict exhaust gas flow, these copper gaskets permit unrestricted flow
- For use on all Evolution, Twin Cam and M-Eight engines
- Sold in pairs or in 10-packs
- Made in the U.S.A.

FORK SEALS

- Leak Proof Classic fork seals are made of a premium-blend buna N rubber compound
- Classic fork seals are rated up to 400 psi – nearly four times that of OEM; their pressure-balanced design allows them to float in the cavity, reducing running and break-away friction resulting in improved abrasion resistance, longer seal life and a 20% reduction in stiction over stock seals
- Leak Proof Pro-Moly seals have an added Patented G+ formula that reduces stiction 60% over stock seals – they seal effectively in pressurized and non-pressurized forks, conventional or upside-down
- Sold in pairs
- Leak Proof seals are made in the U.S.A. and require no special tools for installation

**FORK SEAL AND DUST WIPER KITS**

- Seal profile is engineered to create equal pressure in each seal lip; equalized seal pressure creates less drag and longer seal life
- Patented MAX-LIFE has a coefficient of friction up to three times less than the OEM seal material
- Triple-lip seal design
- Directional ribs allow seal to be installed easily
- Kits include fork seals and dust wipers
