Replacement Safe-T-Lock Spring Clip for use with any Tsubaki as an added safety precaution. Assures the master link does not come apart and adds extra strength to the master link. This clip should not be used more than once, 50 pack.
VT No. 19-0551

530 Sigma O-Ring Chain with 10,600 lbs. tensile strength, features heavy-duty, wide-waist link plates for increased durability. Solid and projected shouldered bushings utilize Tsubaki's unique

Micron Control technology for concentricity and cylindrical accuracy. Micron Control production technology has decreased initial stretch to .01% and increased wear life up to 100% over conventional chain. Sigma is perfectly proportioned to provide extraordinary strength with minimum weight.

530 Standard Diamond is the mainstay of the motorcycle chain. It has been continuously upgraded by raw material selection, improved heat treating methods and innovative manufacturing and production techniques, which have been patented by Diamond, to keep it in step with the demands of today's motorcycles.

530 XDL Self Lube eliminates the possibility of hit and miss lubrication, as it has a constant and consistent lubrication in the pin bushing (wear) area.

Combines the high strength and capacity of Diamond's proven performance with the advantages of fewer adjustment and less maintenance. Added strength is made possible by thicker and redesigned contour inside link plates.

Internal Throttle

36-0570

36-0595

VT No. 36-0570 Internal Throttle Sleeve. Custom design allows pull action of throttle cable for use with billet grips.

VT No.	Item
36-0570	Throttle
36-0595	Ball Bearing

1. Cut 2 3/8" off end of handlebar. Remove end of throttle handle that would attach to throttle cables.
2. Mark handlebar for inner throttle sleeve. Drill a hole for the set screw, this will hold throttle on the handlebar.
3. Remove set screw from the outer sleeve of spiral. Slide grip on & mark end of grip on the handlebar. Measure from this mark back to set screw in outer sleeve. This measurement will be used to mark & drill the throttle grip. Once drilled install grip. Use a small amount of Loctite® on set screw for final installation.
4. Note Set Screw (A) do not tighten so as to make contact with handlebar it will prevent throttle from turning.

The LED

The LED (Light-Emitting Diode) is an electronic light source. Invented in the early 20th century and introduced as practical electronic component in 1962. All early devices emitted low-intensity red lights but modern LED's are available across the ultraviolet and infrared wavelengths with very high brightness.

Typical indicator LEDs are designed to operate with no more than 30-60 milliwatts of electrical power.

Solid state devices such as LEDs are subject to very limited wear and tear if operated at low current and at low temperature. Many of the LEDs produced in the 1970s and 1980s are still in service today. Typical life times quoted are 25000 to 1000000 hour, but heat and current settings can extend or shorten this time significantly.

SMD Bulb

SMD

So what is "SMD"?

SMD Stands for Surface Mounted Device. An electrical component that is usually mounted on the surface of a circuit board. Advanced technology has made these components smaller and smaller. Manufacturers are now making SMD LED's (Light Emitting Diodes). These incredible small SMD LED's are extremely bright and allow for more light in a compact bulb. Replace an old conventional bulb with these super bright, extended life, low energy bulbs.

Did you know?

LED lights are polarity sensitive. It is a smart idea to test LED assemblies, is not color coded prior to assembly.

LED Polarity

Ever soldered a LED into your project backward it can really mess up a good day! If you don't know, LED's have a positive and a negative side, and will only light up when wired correctly. Most LED's have one longer lead to indicate the polarity, but not all.

Warranty

LED Boards will be warranted only. No credit will be issued on any lamps or components with the 33 prefix. Lamps will either be exchanged or repaired and returned to the dealer.

This item contains a chemical that is known to cause cancer, or birth defects or other reproductive harm.

Visor

Did you know?

LED lights are polarity sensitive. It is a smart idea to test LED assemblies, is not color coded prior to assembly.

LED Polarity

Ever soldered a LED into your project backward it can really mess up a good day! If you don't know, LED's have a positive and a negative side, and will only light when wired correctly. Most LED's have one longer lead to indicate the polarity, but not all.

Warranty

LED Boards will be warranted only. No credit will be issued on any lamps or components with the 33 prefix. Lamps will either be exchanged or repaired and returned to the dealer.

33-2071

Badlands ATS-03 Self Canceling Modules are designed to provide a less expensive alternative to the factory flasher module. The ATS-03 module not only has a built in 11-second flasher but it also is a Load Equalizer which allows you to use small incandescent bulbs, halogen bulbs or LED's without any rapid-flashing issues. The ATS-03 also has a 4-way flasher feature for safety or parade mode just like the factory flasher unit. Note: Be sure to identify which connector is on the bike before purchasing as the factory was not consistent during 1994-2000 with connector.

VT No.	Description	Fits
33-2071	Hand-Wire Self Cancelling	Universal on 1973-90 models without self cancelling module on custom bikes

Turn Signal Equalizer

Intensifier Hi-Low Modules convert single function LEDs, Halogen or Incandescent bulbs to high and low dual functions (run & stop, run & turn or high and low). Works for tail lamps, signals, marker lamps, rear fender tip, neon accent lighting or driving lights.

VT No. Application

33-2215 Single Input/Single Output will run single or multiple driving lights for high and low, single or multiple marker lights for run and stop. Also can do run and turn on a pair of turn signals but 2 units are required. Will run up to 50 watts total for driving lights.

33-2216 Dual Inputs/Dual Outputs does run and stop or high & low. Does run & turn for a pair of turn signals with one module. Runs up to 100 watts total for driving lights.

Turn Signal Load Equalizer returns amperage draw to correct factory specifications when aftermarket marker lamps are used to replace stock turn signals in bikes with self-cancelling systems (1991-99). **Note:** For all 2000-up models and 1991-99 models using LED signals use load equalizer III only.

VT No. Brand

33-2137 Badland LE-01

32-1558* Volt Tech

32-0874 Volt Tech

32-2142 Badlands LE-02 for models with 4 way flashers same features as LE-01

32-2148 2 Pin for LED turn signals on bikes

32-2149 3 Pin for use with 7 amp batteries or higher.

***Note:** Black wire is ground and two yellow wires.

32-0845 12V

32-1632

Traffic Light Sensor will trigger stoplight from motorcycle when on traffic light pad.

VT No. 32-1352

Turn Signal Load Equalizer III designed to specifically work on all Twins with OEM Alarm System or self cancelling turn signal module. Solid state design works with Halogen or LED signals and eliminates erratic blinking of signals. **All Equalizers** are Plug and Play except 33-2138 and 33-2014 which are hardwire.

VT No. Brand Fits

33-2138 Badlands 1988-13 FLT, 1991-10 FXST, 1994-11 Dyna, 1991-03 XL

32-2014 Volt Tech As Above

33-2213 Badlands 1997-13 FLH, 1996-10 FXST, FLST 1997-11 Dyna, 1999-03 XL

33-2214 Badlands 2004-13 XL

32-2143 Badlands 2010-13 FLTR only (Street Glides & Road Glides only)

32-2144* Badlands 2011-up FXST, FLST, 2012-up

32-2145* Badlands 2012-up FXSB, 2011-up FLS only

32-2146* Badlands 2014 FLT

32-2147* Badlands 2014- XL

***NOTE:** The ONLY time a load equalizer is needed is when you install aftermarket turn signals on a 2011-UP FXST, 2012-UP Dyna or ANY 2014-UP model and you have rapid flashing turn signal indicator lights. The bike will also throw a trouble code. Unlike earlier equalizer modules, CAN/Bus bikes require (1) module for front and (1) module for the rear turn signals.

Illuminator Pro Module. This module control features automatic cancelling of signals. Front running lights and turn signals on single filament halogen on incandescent

bulbs and LED's. Rear running lights, brake light function and turn signals on single filament halogen or incandescent bulbs as well as LED's. Built in load equalizer runs LED's up to 50 watts per lamp and emergency flasher mode that does not build up heat. Use on all Twins without self canceller.

Pingel® Fuel Valve with nut fits 1975-94 and without nut is 3/8" NPT for 1975 and down. Unit features a metric nut utilizing right and left hand thread, so once installed adapter nut can be loosened, valve put in the desired position and nut retightened. No need to use teflon tapes meaning less chance of leakage.

Note: For use with 5/16" fuel line.

AVON
TYRES

Avon 120/70 H-21
Installed

Avon AM-41 Tubeless Tire. The Venom series symbolizes Avon's leading line of cruising and high load touring tires. The unique sequential tread pattern produces an exceptionally quiet ride. The multi arc tread contour provides a light, neutral turn in and exceptional cornering stability. Advanced casing technology provides for low rolling resistance, cooler running and high mileage, yet soft enough to yield high levels of grip. HB and VB are Aramid Belted.

46-0037

16" Coker Tire is available 2" wide whitewall or blackwall. Full height is 5.00" x 16" profile. V-Twin was the first to use the term **GANGSTER WHITEWALL** for motorcycle tires in 1985.

VT No.	Type
46-0255	2" Wide Whitewall
46-0037	Blackwall

****WARNING:** Newly fitted tires should not be subjected to sudden acceleration, hard cornering, or maximum power or braking for at least 100 dry miles. Loss of control and serious injury or death may be a result in doing so. By waiting till the 100 mile break in the rider will become accustomed to the feel of the new tires or tire combination. You should check and adjust inflation pressure to recommended levels after tires cool for at least 3 hours following run in.

The original "Gangster" since 1985!

Mini Air Compressor powered by cigarette lighter socket or connects to battery with cables supplied. Features a compact design to fit inside a saddlebag. **VT No. 16-1634**

A Note about our Leather Solos

There are literally over 1000 different type of seats on the market today, but if you still want something really comfortable on long trips the old plunger style seats are very hard to beat. This leather covered contoured seat fits like a glove and the plunger action will keep your ribs from dropping to your knee caps by absorbing those large bumps such as rail-road tracks and manhole covers.

Our leather is top grade cow hide for a long lasting appearance. A chrome passenger rail is available for both styles. When you ask any cop, who has ridden the freeways and highways of the USA for 30 or more years, what he misses most on his late model, he will tell you short and simple: the seat.

-Ray Boone RBE 1987

Chrome Seat Spring Kit is for use with stock seat "T" on rigid frame models. Kit includes a set of two 7" seat springs with loop mounts for lower studs, a three piece 1" I.D. clamp set, seat stud set, spring stud set, nylock nuts and flat washers. Fits 1936-1952 EL, 1941-57 FL.

Replica™ Solo Seat

Rolled Edge
Hermann Oak
Leather used in
seat construction.

Note: All seats on
this page are **P**.
P= Police Solo Size.

Over 25,000 sold since 1977!

Replica™ Early Leather Solo Rolled Seats by Corbin-Gentry are constructed using genuine drum dyed leather cover with padding on an accurate steel formed and ribbed baseplate with brackets riveted in place as original. Authentic style seams are accomplished by first riveting a leather strip to the seat pan and then form fitting the leather cover to the saddle, and finally sewing the cover to the strip. Edge is the "Rolled Edge" where the leather is covering the seam between the cover and fastening strip.
